PROFILE

Looking for good opportunity where I will get to improve my skills which will help me in my work as well. I am an Automation Test Engineer with working attitude towards transitioning from manual to automation tasks and desperate to solve the manual problem statement. I am holding 5+ years' experience working in Automation testing by using Core JAVA Programming, Selenium WebDriver, BDD Cucumber, TestNG, POM, GIT, Jenkins, WDIO, Protractor, typescripts, GCP, Logs, Database, Regression Suite. Also having API Testing experience using Postman tool And Manual testing and Mobile testing and also Agile Methodogoly. Good communication skills, belief in teamwork, able to quickly adapt and learn new technologies and strong technical/process skills.

PROFESSIONAL EXPERIENCE

HCL Tech -Client Deutsha Bank, Senior Test Engineer 06/2024 – present | Nagpur

- Designed, developed, and maintained end-to-end test automation framework using **WebdriverIO (WDIO)** with **TypeScript**, enhancing test reliability and maintainability.
- Led a team of 4 QA engineers to develop and maintain a CI/CD pipeline with **Jenkins and Github, Bitbucket**, enabling daily automated test execution.
- Integrated API testing using **Postman and REST Assured**, improving coverage and catching 30% more defects in backend services.
- Collaborated closely with developers and product managers in Agile sprints to define acceptance criteria and refine test cases.
- Mentored junior automation engineers and conducted code reviews to ensure the quality and maintainability of test scripts.
- Spearheaded migration of legacy tests to a microservices-based test architecture, improving test reliability and execution speed by 45%

Memorres Digital Pvt. Ltd. -Client US Based, QA Engineer 08/2023 – 06/2024 | Jaipur

- Collaborated with Product Owner and Senior Management to develop and design test plans and analyze business requirements.
- Designed and implemented test plans, test cases, and strategies for **Manual and Automation Testing** based on functional requirements, design specifications, and **Traceability Matrix** to link requirements with test cases.
- Conducted web application testing using Selenium with a **BDD framework (Maven, POM)** and used libraries such as **Apache POI, Extent Reports, and Log4j**
- Conducted **Mobile testing** on Android and iOS devices using **BrowserStack**.
- Executed Cross-browser testing, Cross-device testing, Manual testing, System testing, Functional Testing, User Acceptance Testing (**UAT**), **Smoke** testing, Sanity testing, Regression testing, and Integration Testing for both Web and Mobile applications.
- Executed test cases, analyzed results, documented and tracked bugs (**Jira**), verified and validated fixes, and collaborated with development teams to resolve issues.
- Actively participated in sprint planning, design reviews, daily meetings, and issue resolution/blocker discussions.

Client - JP Morgan, Automation Test Engineer 04/2020 – 07/2023 | Pune

- Developed test strategy, test scenarios, defect reports, and results matrices; delegated assignments.
- Created and maintained test cases and generated test data by thoroughly analyzing requirements for new and existing features.
- Executed Smoke, Functional, Regression, Integration Testing, and end-to-end testing.
- Designed Automation Test cases using **Selenium WebDriver, Java, TestNG, Maven, and Jenkins** within a **Hybrid Framework**.
- Participated in Scrum meetings to provide updates on project progress.
- Produced Testing deliverables such as Requirements Traceability Matrix (RTM) and Test Summary Reports.
- Conducted **API Testing** using Postman.
- Proficient in **RDBMS** and associated **SQL** queries.
- Familiar with **Performance** Testing using **JMeter**.
- Estimated project efforts accurately.

PROJECTS

Project Name 1: Employee Registration and License Service,

06/2024 – 09/2025

Domain : Investment Banking

- Designed and developed end-to-end case workflows, enabling users to create, update, and complete employee registration cases efficiently.
- Implemented modules for education and functional details, ensuring structured data capture and validation.
- Built a document submission and review system allowing users to upload, verify, and manage supporting documents.
- Enabled peer review functionality for quality assurance before final case approval.
- Integrated case reassignment and feedback mechanisms between case owners and reviewers to maintain process transparency.
- Configured automated notifications and reminders to keep stakeholders informed on case progress.
- Collaborated with team members to analyze requirements, design UI/UX flows, and define key business rules.
- Ensured data consistency and audit tracking for all user actions within the system.
- Participated in code reviews, defect fixing, and testing cycles to deliver a stable release.

Project Name 2 : GECCO, Domain : Investment Banking Domain

09/2025 – Present

- Worked on the Employee pillar of the Gecco platform, focusing on the GECCO application and Employee Compliance (EC) Monitoring module.
- Involved in developing and testing workflows for alert statements, collection, CCN accounts, trade pre-approval requests, QA review, and unmatched accounts.
- Contributed to the QA Review process, implementing functionality to manage pass/fail reviews for employee compliance alerts.
- Participated in requirement analysis and test case preparation to ensure functionality aligns with compliance policies.
- Validated trade pre-approval requests and employee account linkages to identify exceptions or mismatches.
- Collaborated with development and compliance teams to analyze defects, ensure accuracy of compliance data, and improve process efficiency.
- Performed functional, regression, and integration testing for EC monitoring features.
- Assisted in automation of review validation and improved consistency in pass/fail decision tracking.
- Worked on data validation and backend verification for alert and account mapping features.

Project Name: Connecting Your Community, Domain: Community Domain

08/2023 – 06/2024

- Application is made for residents aged 50 and above. The platform facilitated connections, event participation, and facility bookings within local societies or neighborhoods.
- The project comprised three primary panels:
 - SaaS Owner Panel
 - Developed a robust panel allowing SaaS Owners to manage roles, add companies, and appoint managers and administrators.
 - Company Admin Panel
- The design and functionality of a user-friendly admin panel enable company administrators to oversee all aspects of the community engagement features such as event management, resident management, facility bookings, perks, and group access control.
- Resident Mobile App
- A mobile application was providing residents with tailored access codes during signup, granting location-specific access. Empowered users to seamlessly participate in events, book facilities, join groups, and interact with posts and comments.

Project Name : Asset Management And Trading,

04/2020 – 07/2023

Domain: Investment Banking Domain

- Application used by Asset Managers for trading activity on different financial securities like equity, bonds, futures and options.
- Mainly used for trading, position keeping and risk management features.
- For position keeping, facility is to see daily / weekly basis profit and loss, price change percentage.
- Then there is risk management application where risk calculation parameters like theta, beta gamma are calculated on portfolio.
- Also, there are reports like profit and loss statement, realized, unrealized statement.
